
Chatty Maps: Constructing Sound Maps of Urban Areas from Social Media Data

Aiello et al. (2016)

Muriel Geissmann, Lea Stoffel, Guillermo Filgueira Fernandez & Julia Good

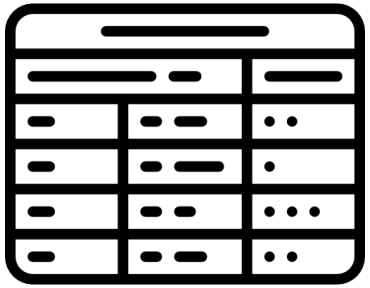
30.04.26

Research Questions (Lea)

1. Can urban soundscapes in Zurich be inferred from geotagged Flickr tags?

2. According to the Flickr tags, which noise categories are dominant on different road sections in Zurich?

Data Sources (Lea)



Geotagged Photos:
Flickr posts

Streets:
Official Street Directory of Switzerland

Spatial boundary:
Municipal boundary of Zurich

Spatial Algorithms (Lea)

1. Julia: Dividing Street Segments
2. Muriel: Creating Buffer
3. Guillermo: Point in Polygon (Buffer)

Preprocessing of Flickr data (Lea)

- Typos
- Lower-upper case
- Languages
- Filter for Zurich

Construction of Sound Wheel (Lea)

- Take sound wheel from paper and add words

Dividing Streets into segments (Julia)

- Streets from Switzerland, filter für zurich, divide for name and then length

Creating Buffer around Street Segments (Muriel)

Points in Polygon (Guillermo)

Challenges at the moment
